

The AI-Augmented Biotech Company

Evidence-based intelligence for lean, fast-moving therapeutics teams

Early-stage biotech teams are asked to do the scientific, competitive, regulatory, clinical, and commercialization work of a much larger organization — with a fraction of the headcount and no room in the budget for a dedicated analytics function.

OniX AI Agents become an additional team member: private, evidence-based intelligence across the full asset lifecycle, from target discovery through partnership or exit — grounded in real data, with every conclusion traceable back to its source.

596,277+ registered clinical trials, 226 countries	270M+ core publications indexed	2.1M+ combined grant records

What's Live Today

- Scientific & competitive landscape monitoring — App1
- Asset intelligence & comparable technology mapping — Asset Intelligence Agent
- Patent landscape, prior art & licensing intelligence — App4
- Foundation & government funding landscape — App1
- Regulatory intelligence & comparable program history — App3
- KOL identification & competitive trial tracking — App1
- Clinical Trial Site Experience Report — App1
- CT Protocol Benchmark & Design Report — Trial Complexity Score, comparison tables/charts, Phase Progression — App1

In Testing

- Preclinical Methods (In-Vitro/In-Vivo) Report

Why Not General AI?

General AI generates text. Building a therapeutics asset requires generating evidence. OniX orchestrates specialized workflows across trusted biomedical, patent, funding, clinical, and regulatory data — sized and priced for a founding team, not an enterprise analytics budget.

Happy to walk through a live demo and set up trial access for your team.
