

OniX Search and Evaluation Services:

Accelerating Biotech Innovation Through Strategic Asset Discovery

Introduction: Bridging Innovation and Opportunity

In the complex and rapidly evolving landscape of biomedical research, identifying and evaluating breakthrough therapeutic assets is both an art and a science. Researchers and biotech companies face unprecedented challenges in navigating the global innovation ecosystem, requiring not just scientific expertise, but strategic intelligence and comprehensive market insights.

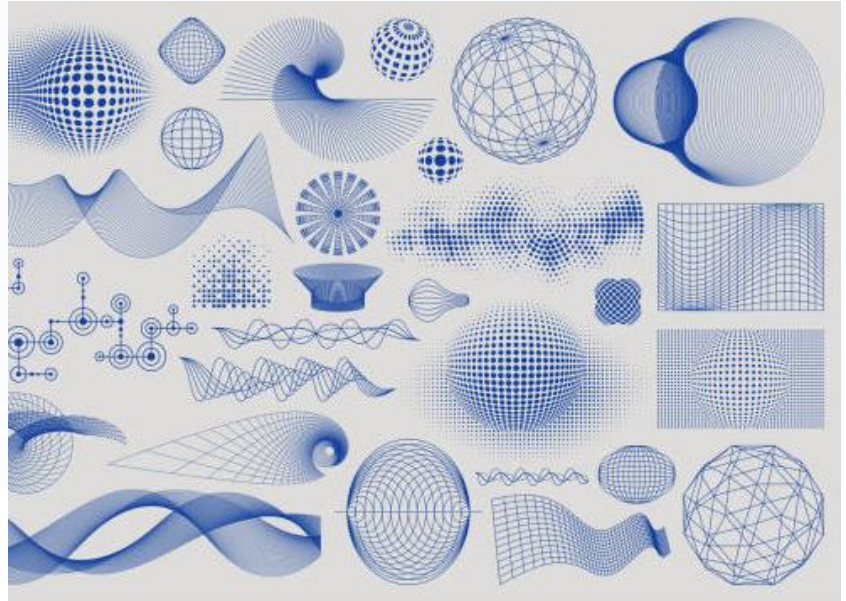

The Hidden Competitive Advantage: Search and Evaluation in Biotech Innovation

Historically, robust search and evaluation capabilities have been the exclusive domain of large pharmaceutical companies with extensive resources and dedicated teams. These organizations invest millions annually in competitive intelligence units that systematically scan global research landscapes, identifying emerging therapeutic assets, tracking competitive developments, and assessing market potential before most researchers or smaller entities are even aware of their existence.

For emerging biotech startups and mid-size companies, this sophisticated approach has been largely inaccessible. The traditional barriers—prohibitive costs, lack of extensive networks, limited data infrastructure, and the complexity of global research tracking—have created a significant strategic disadvantage. Smaller organizations often find themselves reactive rather than proactive, missing critical opportunities or investing resources in areas already saturated or scientifically challenged.

OniX democratizes this strategic capability. By leveraging advanced data analytics, extensive global networks, and deep industry expertise, we bring the sophisticated search and evaluation methodologies traditionally reserved for pharmaceutical giants directly to innovative startups and growing biotech companies. Our platform transforms information asymmetry from a barrier into a strategic opportunity, enabling smaller organizations to compete with the same level of market intelligence as industry leaders.

Our approach goes beyond simple data collection. We provide:

- Comprehensive landscape analysis
- Early identification of emerging therapeutic assets
- Rigorous scientific and commercial potential assessment
- Strategic positioning recommendations
- Access to hidden or stealth research opportunities

In essence, OniX doesn't just provide data—we provide a strategic lens through which emerging biotech companies can view, understand, and navigate the complex global research ecosystem.

Our Unique Value Proposition

OniX provides a holistic approach to search and evaluation, leveraging unparalleled data intelligence and strategic expertise to support biotech companies in identifying, assessing, and advancing promising therapeutic assets.

Key Capabilities

Extensive Global Research Database

Transforming data into strategic intelligence

Our repository represents the most comprehensive tracking of global biomedical research:

- Over 1 million curated ideas/assets
- Tracking 36 million scientific publications
- Coverage of 80,000+ startups across 50+ countries
- Live data from 10,000+ biotech and startup pipelines

Strategic Asset Identification

Uncovering hidden potential in the global research landscape

- Weekly curated updates featuring 5,000+ new ideas/assets
- Proprietary tracking of stealth companies and emerging technologies
- Comprehensive market landscaping analyses that go beyond traditional research

Our Search and Evaluation Process

1. Targeted Asset Discovery

Navigating the complex terrain of global biomedical innovation

Our approach combines advanced technology with human expertise:

- Leveraging extensive global network
- Advanced data analytics to identify promising therapeutic targets
- Deep dive into pre-clinical and clinical research landscapes

2. Comprehensive Evaluation

Transforming potential into strategic opportunity

Rigorous, multi-dimensional assessment including:

- Detailed market potential analysis
- Scientific and commercial viability review
- Comparative landscape exploration
- Investment recommendations with robust biological thesis

3. Strategic Positioning

Connecting breakthrough ideas with transformative resources

We don't just identify assets; we create pathways:

- Identifying potential partnership opportunities
- Connecting assets with relevant stakeholders
- Providing actionable intelligence for critical decision-making

Comprehensive Startup Support: Beyond Asset Discovery

While identifying promising therapeutic assets is crucial, OniX recognizes that startup success requires a holistic approach. Our services extend far beyond traditional search and evaluation, providing critical support in three key areas essential to biotech innovation:

1. Strategic Partnership Development

Connecting Breakthrough Ideas with Transformative Resources

Navigating the complex landscape of potential collaborators is a significant challenge for emerging biotech companies. OniX offers:

- Targeted partner identification across academia, industry, and investment ecosystems
- Strategic matchmaking based on scientific alignment and mutual potential
- Facilitation of initial conversations and relationship building
- Comprehensive network access spanning 50+ countries and multiple research domains

Our extensive database and global connections transform partnership development from a daunting challenge into a strategic opportunity.

2. Grant and Funding Support

Turning Scientific Potential into Financial Momentum

Securing funding is often the make-or-break moment for innovative biotech startups. OniX provides comprehensive support:

- SBIR/STTR Grant Application Guidance
 - Expert support for NIH, CDC, FDA, and NSF grant applications
 - Strategic advice on crafting compelling proposals
 - Access to up-to-date industry trends and data

- Assistance in identifying complementary academic and industry collaborators
- Private Foundation Grant Opportunities
 - Connections with research and patient foundations
 - Proposal development support
 - Identification of targeted funding sources
 - Strategic positioning of research assets
- Fundraising Preparation
 - Develop investor-ready pitch materials
 - Market potential assessment
 - Competitive landscape analysis
 - Investor network introductions

3. Regulatory and Compliance Navigation

Simplifying the Path from Discovery to Development

Understanding and navigating regulatory landscapes can be overwhelming for emerging biotech companies. OniX offers:

- Pre-IND (Investigational New Drug) process guidance
- Regulatory authority communication support
- Compliance strategy development
- Risk mitigation planning

The OniX Advantage: Comprehensive, Collaborative, Transformative

By providing these integrated services, OniX does more than offer data—we become a strategic partner in your innovation journey. Our approach addresses the multifaceted challenges faced by biotech startups, transforming potential barriers into pathways for success.

Why Choose OniX?

- **Unmatched Data Repository:** Largest tracked database of biomedical research assets
- **Expert Analysis:** Team with deep pharmaceutical and biotech industry experience
- **Global Perspective:** Insights spanning multiple geographies and research ecosystems

- **Actionable Intelligence:** Transforming raw data into strategic opportunities

Tailored Services

- Market Landscaping
- Therapeutic Asset Evaluation
- Competitive Intelligence
- Strategic Partnership Identification
- Fundraising and Grant Support
